**AVOID SLIP FALL ACCIDENTS
CAUSED BY WET FLOORS.**

NOW IN INDIA

5 Year warranty applicable to residential use only

Now you can make your home slip fall accident resistant in couple of hours.

Slip fall accidents on wet surfaces are a major problem every where right from residences, hotels, malls, commercial establishments, hospitals, etc. Every year hundreds of crore gets spent on medical expenses in India due to Slip fall accidents. Lizard Grip offers a complete solution for wet slippery floors.

- Slip fall Injury in Bathroom & Kitchen is a major problem all over the world.
- 50 thousand people visit hospital every day due to slip fall injury.
- Slip fall Injury is the 2nd leading cause of accidental deaths.
- 12 million people become Physically disabled due to slip fall Injury every year.
- Nearly 90% of all hip fracture cases reported above 60 years of age are due to slip fall injury and usually most of them are irreparable damage.

I have put anti-skid tiles in wet areas to prevent slipping!

- Let us see how Safe is our Anti-Skid Tiles:
- Anti Skid tiles have convex indentation.
 - Continuous flow of water and protein residuals damages the convex indentations.
 - Protein molecules of shampoo and soaps leads to unwanted bacterial & fungal growth, hence the surface becomes even more slippery.
 - Therefore, in wet conditions the COF drops to 0.2 from 0.3 making the floor extremely dangerous to walk.
- ANTI SKID TILES ARE MORE DANGEROUS THAN NORMAL TILES UNDER WET CONDITIONS.**

Lizard Grip™

ANTI-SLIP FLOOR SOLUTION

LIZARD GRIP ADVANTAGES

- ★ No need to change your current flooring.
- ★ Can be applied on Ceramic tiles, Granite, Vitrified tiles, Marbles, etc.
- ★ No visible change in the look or texture of the flooring.
- ★ Very easy to apply.
- ★ Floor ready to use in 45 minutes to 1 hour.
- ★ Proven product with many applications around the world. Available in over 18 countries.

How does Lizard Grip™ work?

This unique anti-slip solution is formulated to create thousands of micro shallow indentations on the surface. When the surface is wet, these shallow indentations get filled with water. Thereafter, when someone stands on the wet surface and one foot starts to slide, the water is squeezed out of the indentations turning them into thousands of suction cups and helps in stopping the foot from slipping. It is similar to the technology Lizard uses to walk on the wall.
